Message

Agriculture continues to play a pivotal role in India's economy, food security, and rural livelihoods. In an era marked by dynamic challenges—climate change, global market fluctuations, and increasing demand for sustainability—the role of reliable and timely statistics has become more critical than ever. Accurate data not only reflects the progress made but also helps identify gaps and guide strategic interventions.

Agricultural Statistics at a Glance published by Economics, Statistics and Evaluation Division serves as an authoritative source of comprehensive and timely statistical data on the Indian agriculture sector, serving as an essential reference for policymakers, researchers, development partners, and stakeholders across the agricultural value chain. The publication provides valuable insights into a wide array of agricultural indicators, including crop production, irrigation, land use, productivity, and more. By consolidating diverse datasets into a single, easy-to-reference document, this volume provides a clear overview of the agricultural landscape both at the national and state levels. It facilitates evidence-based decision-making and supports strategic planning across various domains of agricultural development.

I commend the dedicated efforts of the team of Agro-Economic Research Unit at Economics, Statistics and Evaluation Division for compiling this volume with accuracy and diligence. I trust that Agricultural Statistics at a *Glance* will continue to serve as a key reference for everyone involved in agricultural planning, research, and development for informed decision-making and strategic planning in agriculture.

PREFACE

Agricultural Statistics at a Glance, the flagship statistical publication of Economics, Statistics and Evaluation Division, Department of Agriculture & Farmers Welfare (DA&FW), serves as a vital repository of data and trends related to Indian agriculture, compiling the most current and comprehensive statistical data related to Indian agriculture, enabling informed decision-making, effective policy formulation, and focused program implementation.

This edition has been carefully curated, ensuring that the statistics presented are both relevant and up-to-date. It highlights crucial information on crop acreage, yield, agricultural inputs (such as fertilizers, seeds), credit and insurance, prices and procurement, agricultural exports, and allied sectors like livestock and fisheries. It includes both current statistics and time-series data, enabling users to analyze long-term trends and patterns across different regions and crops. It draws on a wide range of sources, including government departments, agricultural research organizations, and field surveys, to provide a holistic view of the agricultural landscape.

In an effort to enhance accessibility, a digital version of the publication has been made available on our websites: www.agriwelfare.gov.in and desagri.gov.in.

I would also like to express my sincere appreciation to all officers of Agro-Economic Research (AER) Unit of Economics, Statistics and Evaluation Division, DA&FW, who, under the able guidance of Dr. Promodita Sathish, Adviser, have prepared and published this valuable resource.

Notes:

1. For 2001, figures include estimated figures for those of the three sub-divisions viz. Mao Maram, Paomata and Purul of Senapati district of Manipur as census results of 2001 Census in these three sub-divisions were cancelled due to technical and administrative reasons.
2. The 1991 Census could not be held owing to disturbed conditions prevailing in Jammu & Kashmir. Hence the population figures for 1991 of Jammu & Kashmir have been worked out by 'interpolation'. The data on workers in Col. 5-7 exclude J&K.
3. The 1981 census could not be held in Assam. The figures for 1981 for Assam have been worked out by interpolation. The data on workers in Col. 5-7 exclude Assam.
4. Figures within parentheses in Col.-4 are percentages to the Total Population.
5. Figures within parentheses in Col.-6 and 7 are percentages to Col.-8.
6. Figures within parentheses in Col.-8 is percentage share of Agricultural Workers in Total Workers.

Notes:

1. Poverty estimates are based on the methodology suggested by the 'Expert Group on Methodology for estimation of poverty', chaired by Dr. Suresh.D. Tendulkar
2. Number of persons below poverty line in 2004-05 are estimated based on Population as on 1st March 2005 (revised on the basis of 2011 population census)
3. Number of persons below poverty line in 2009-10 are estimated based on Population as on 1st March 2010 (interpolated between 2001 and 2011 population Census)
4. Number of persons below poverty line in 2011-12 are estimated based on Population as on 1st March 2012 (2011 Census population extrapolated)
5. Poverty line of Tamil Nadu is used for Andaman and Nicobar Island.
6 Urban Poverty Line of Punjab is used for both rural and urban areas of Chandigarh.
7. Poverty Line of Maharashtra is used for Dadra & Nagar Haveli.
8. Poverty Line of Goa is used for Daman & Diu
9. Poverty Line of Kerala is used for Lakshadweep.

Note: #: Final Estimates,$: First Revised Estimates; & Second Advance Estimates (As on 28.02.2025)
* Provisional; ^ April-Nov 2024
**: Calculated from April-December, NA: Not Available
a: GDP estimates prior to 2011-12 are at factor cost based on 2004-05 series. Estimates from 2011-12 onwards are based on 2011-12 series
b: Per capita Income prior to 2011-12 are based on constant (2004-05) prices and from 2011-12 onwards are based on constant (2011-12) prices
c: Figures upto 2010-11 are percentages of GDP at market prices (2004-05 series) and from 2011-12 onwards are percentage of GDP estimates based on 2011-12 series
d: Base year for data till 2000-01 is Triennium ending (T.E.) 1981-82 and for data from 2010-11 onwards is T.E. 2007-08
e: IIP and WPI from 2012-13 onwards are as per Base Year: 2011-12=100 and earlier data is based on old base years.
f: Figures from 2021-22 onwards are based on Base Year: 2016=100 and earlier data is based on old base years.
g: As on 28.02.2025
h: Relates to mid-financial year (as on October 1) based on estimated population figures of CSO
i: Estimates from Sample Registration System (SRS) Statistical Report, Office of RGI.
j: The figures for 1951 1961 and 1971 census relate to population aged 5 years and above and those for 1981, 1991, 2001 and 2011 to population aged 7 years and above.
k: Figures are for 2014-18 as given by RGI.
l: from April to December

Notes:

1. Figures are as per New CPI series introduced from January 2011. Data for this series is available with Base: 2012=100
2. Yearly indices are simple average of monthly indices
3. Figures in the parentheses show percentage Growth Rate (inflation) of CPI
4. Data is imputed for certain commodities for April, 2020 and May 2020 as due to COVID it was not feasible for the field enumerators to visit the specified retail outlets to collect data/price quotations
   Imputed Sub-group Index (Food Group) = (Last Observed Index of Sub-group) x(Food Index of Current Month/Food Index of last Observed Month)
   Imputed Sub-group Index (Non-Food Group) = (Last Observed Index of Sub-group) x (General CPI of Current Month/General CPI of last Observed Month)
5. CPI for 2021-22 is calculated with provisional data for the month of September 2021

Notes:-

i) Net availability of foodgrains is estimated as: Gross Production (-) seed, feed & wastage (-) exports (+) imports (+/-) change in stocks.

ii) Net availability of foodgrains divided by the population estimates for a particular year indicate per capita availability of foodgrains in terms of kg/year.

iii) Estimates of per capita net availability given above are not strictly representative of actual level of consumption in the country especially as they do not take into account any change in stocks in possession of traders, producers and consumers.

iv) Foodgrains include rice, wheat, other cereals and all pulses

v)The per capita net availability of foodgrains is calculated on Financial Year basis from 2022 onwards and is not comparable with the old series which was based on calendar year

(P) Provisional NA: Not Available

a: Includes Groundnut Oil, Rapeseed and Mustard Oil, Sesamum Oil, Nigerseed Oil, Soybean Oil and Sunflower Oil but excludes oil for manufacture of Vanaspati.

b: Relates to calendar year.

c: Relates to actual releases for domestic consumption. Sugar season/year commencing from November to October of following year as opposed to financial year.

d: The data of cloth; prior to 1980-81 is calendar year wise, in meters up to 1984-85 and square in metre from 1985-86 onwards.

e: Figures for blended/mixed fabrics were not separately available prior to 1969. These have been included under man-made fibre fabrics after 1969.

f: Figures upto 1971-72 relate to coffee season and thereafter on calendar year basis. The figures for 1972-73 correspond to 1973 and so on.

* There was no import of Urea in 2000-01, 2002-03 and 2003-04 in Government account.

Note : 1. Figures relate to imports made on Govt. Account only.

2. The imports made after decanalisation of phosphatic fertilisers (w.e.f. 17.9.1992) and potassic fertilisers (w.e.f. 17.6.1993) include the quantities imported by private parties also.

3. * up to November, 2024

4. $ up to January, 2025

Source: E,S & E Division, DA&FW

Note: 1: Percentages worked out over Reported Area.

2: In 2009-10 there is significant decline in Total Cropped Area and Net Area Sown due to decline in net area sown in the States of Andhra Pradesh, Bihar, Jharkhand, Rajasthan, Tamil Nadu, Uttar Pradesh and West Bengal. This was mainly due to deficient rainfal

(P):Provisional

* Cropping Intensity is percentage of the gross cropped area to the net area sown.

Source: E&S Division, DA&FW

'0' relates to the area below 500 hectares.

*The figures related to area under forest are taken from latest "State of Forest Report," of the Forest Survey of India, Dehradun. The other categories of land use, net irrigated area, gross irrigated area, net area sown and area under crops as the case may be, are taken from latest Agriculture Census or are estimated based on latest available year data received from the States/UTs, respectively.

Source: Department of Land Resources
Note:
1. The actual limits for lands in Karnataka and Uttar Pradesh are higher due to classification of land.
2. The actual ceiling limits in Himachal Pradesh and Rajasthan are higher due to hilly terrain and desert lands.
3. 1 Acre = 0.404686 Hectare.

@: Total number of Meteorological sub-divisions was 35 upto 2001. From 2002 onwards, the no. of meteorological sub-divisions is 36

Large Excess :- + 60% more of Long Period Average Rainfall

Excess : Between + 20% and + 59% of Long Period Average Rainfall

Normal : Between + 19% and -19% of Long Period Average Rainfall

Deficient : Between -20% and -59% of Long Period Average Rainfall

Large Deficient : Between -60% and -99% of Long Period Average Rainfall

Source: World Food And Agriculture Statistical Yearbook 2024
Water stress is the ratio between total freshwater withdrawn by all major sectors and total renewable freshwater resources, after taking into account environmental water requirements.

Appendices

Appendix-I

Cost of Cultivation/Production Estimates

1. The Cost of Cultivation/ Production estimates used in the Publication are generated by the Cost Study Section of Economics, Statistics & Evaluation Division through Comprehensive Scheme for studying Cost of Cultivation of Principal Crops in India. The Scheme was initiated in 1970-71 on the recommendation of a technical committee on indices of input cost appointed by Government of India. The Scheme envisages collection of representative data on inputs and outputs in physical and monetary terms on a comparable and comprehensive basis following a well-designed scientific sampling methodology which has been designed by the Expert Committees and is reviewed from time to time by the Committees set up for the purpose. Present sampling design is a three-stage stratified random sampling, with tehsils as first stage units, a cluster of villages as second stage units and an operational holding in a cluster as the ultimate stage unit. For the purpose of drawing the sample, each State is divided into different agro-climatic zones based on climate, soil type, cropping pattern, etc. The field data are collected on the Cost Accounting Method by the IAs from 8100 sample operational holdings spread over 19 states. Daily entries of debit/credit for the expenditure/income are made in order to assess the total cost/benefit incurred/accrued to each farmer covered under the scheme.

2. The scheme presently covers major 25 crops(Paddy, Wheat, Jowar, Bajra, Maize, Ragi, Barley, Moong, Urad, Arhar, Gram, Lentil, Groundnut, Rapeseed & Mustard, Nigerseed, Safflower, Soybean, Sunflower, Sesamum, Cotton, Jute, Sugarcane, Onion, Potato and Coconut) and these crops are selected for a block period of three years. The Cost of Cultivation/ Production Estimates being generated with the data collected under the scheme are used as an important input by CACP while recommending MSP of various crops. Apart from this, the data is also used by MoSPI for preparation of National Accounts Statistics. Marketed Surplus Ratio (MSR) which is required for various policy decisions is also compiled from this data.

3. Presently, the scheme is being implemented in 19 States through 16 Universities/Colleges also known as State Implementing Agencies (IAs). Funds are released to IAs through Grant-in-Aid. The Grants-in-Aid are meant for meeting the salary, allowances and office expenses of the Implementing Agency staff working in CS scheme.

Appendix-II

Explanatory Note

Advance Estimates

During an agriculture year, Ministry of Agriculture and Farmers Welfare releases three advance estimates of area, production and yield, based on the data received from State Agricultural Statistical Authorities (SASAs). These estimates are "advance" in the sense that these have been prepared in advance of availability of results of CCE (Crop Cutting Experiments) and are subject to revision as more precise information flows over times from states to this Ministry.

Yield

Yield rate is defined as production per unit of area. However, yield rates of various crops given in this publication may not exactly tally with the ratio of production to the corresponding area because figures of area and production of various crops have been generally rounded off in ten thousands.

Principal Crops

Principal Crops as referred to in this publication include only those crops which are covered for preparation of index numbers.

Nine Oilseeds

Wherever "Nine oilseeds" is mentioned in this publication, it includes Castor seed, Groundnut, Linseed, Nigerseed, Safflower, Sesamum, Soybean, Sunflower and Rapeseed & Mustard.

Appendix-III

Methodology of Index Numbers of Area, Production and Yield

Base Year

The Economics, Statistics and Evaluation Division had adopted Triennium Ending (T.E.) 1981-82 as base year for the purpose of Index Numbers of Area, Production and Yield in Agriculture until 1999-2000. In 2000-2001, it was decided to adopt T.E. 1993-94 as a way of updating the base to a recent year and keep it in harmony with the other series of indices such as Index of Industrial Production, Wholesale Price Index and the series of National Accounts Statistics. Since area and production in agriculture can fluctuate a great deal from year to year, the average of area/ production over the TE 1993-94 was taken as the base year.

It was observed that the base year 1993-94 used for construction of index numbers of Area, Production and Yield of crops has become outdated and stressed on the need for updating of the base year at regular intervals preferably in consonance with the base year revisions of other important indices.

As the period 2005-06 to 2007-08 remained normal from agriculture point of view and the price data available with CSO was for the year 2006-07 which could be used as mid period price for assessment of contribution in value terms for preparation of weighting diagram, it has been considered appropriate to take more recent base, i.e., (TE 2007-08 = 100) as the base for agricultural indices.

Weighting Diagram

The weight of a commodity for the production index is taken as the average production of the commodity in the T.E. 2007-08 and the national average price of the commodity during 2006-07 as obtained from the National Accounts Statistics. This has been done to fix the base production at its average level by eliminating the cyclical variation and to evaluate the production with the same price for all States in view of wide variations observed in the state prices.

Methodology

Let a_{ij} - the area under i^{th} crop in the jth year.

a_{io} - the area under i^{th} crop in base year period.

p_{ij} - production of ith crop in the jth year.

p_{io} - production of ith crop in base year period.

w_i - weight of ith crop.

For the the year j, individual crop indices are calculated as below :

(a) Index number of area $= \frac{a_{ij}}{a_{io}} \times 100 = IA_{ij}$

(b) Index number of production $= \frac{P_{ij}}{P_{io}} \times 100 = IP_{ij}$

(c) Index number of yield $= \frac{IP_{ij}}{IA_{ij}} \times 100$

For any sub-group G of commodities, the indices for the year j are calculated as below:

a) Index number of area $= \frac{\sum_{i \in G} wi\ IA_{ij}}{\sum_{i \in G} wi}$.

b) Index number of production $= \dfrac{\sum_{i \in G} wi\ IP_{ij}}{\sum_{i \in G} wi}$.

c) Index number of yield $= \dfrac{\text{Index number of production} \times 100}{\text{Index number of area}}$

Appendix-IV

Glossary of English, Botanical and Hindi Names of Important Crops

Crop/ Group of Crops	English	Botanical	Hindi
(1)	(2)	(3)	(4)
Cereals	Bara (Bulrush or spiked millet)	Pennisetum Typhoides	Bajra
	Barley	Hordeum vulgare	Jau
	Barnyard millet	Echinochloa frumentacea	Kutki
	Cholam (Great Millet)	Sorghum bicolor	Jowar
	Common Millet	Panicum milliaceum	Cheena
	Little Millet	Penicum milliare	Sawan
	Italian foxtail Millet	Setarisiaitalica	Kangani
	Kodo Millet	Paspalum scrobiculatum	Koden
	Maize or Indian corn	Zea mays	Makka
	Oat	Avena sativa	Jaie
	Ragi	Eleusine coracana	Mundua
	Paddy (Rice)	Oryza sativa	Dhan (Chawal)
	Wheat	Triticum acstivum	Gehun
Pulses and Beans	Black gram	Vignamungo	Urad
	Chickpea (Bengal gram)	Cicer arietinum	Chana
	Chicking vetch	Lathyrus sativus	Khesari
	Cluster Bean	Cyamopiss tetragonoloba	Guar
	Cowpea	Vigna unguiculate	Lobia
	Green Gram	Vigna radiata	Mung
	Horsegram	Dilichos biflorus	Kulthi
	Kidney bean	Vigna aconitifolia	Moth
	Lentil	Lens culimaris	Masur
	Peas	Pisum sativum vararvense	Matar
	Red gram (Pigion pea)	Cajanus cajan	Tur,Arhar
	Soybean	Glucine max	Soyabean
Sugar	Sugarcane	Saccharum Officinarum	Ganna
Fruits	Apple	Malus sylvespris	Seb
	Apricot	Prunus armeniaca	Khoobani
	Cashewnut	Anaardium occidentale	Kaju
	Fig	Ficus carica	Anjeer
	Grape	Vitis vinifera	Angur
	Guvava	Psidium guajava	Amrood
	Jackfruit	Artocarpur heterophyllus	Katahal
	Lemon	Citrus Lemon	Nimbu
	Lime	Citrus Urantifolia	Bara Nimbu

Appendix - IX

Methodology of Crop Estimation

1.1 Introduction

The Economics, Statistics and Evaluation Division, Department of Agriculture & Farmers Welfare releases estimates of area, production and yield in respect of principal crops of food grains, oilseeds, sugarcane, fibers and important commercial crops. These crops account for a significant share in the Gross Value Added by agriculture and allied sector. The estimates of crop production are obtained by multiplication of area estimates by corresponding yield estimates. The estimates of area and yield rates assume prime importance in the entire gamut of agricultural statistics.

1.2 Area Statistics

From the point of view of collection of area statistics, the States in the country are divided into three broad categories.The first category covers States and UTs which are cadastrally surveyed and the area and land use statistics are built up as a part of the land records maintained by the revenue agencies. These states are called "Land Record States" or temporarily settled States. This system is followed in 18 major states of Andhra Pradesh, Assam (excluding hilly districts), Bihar, Chhattisgarh, Gujarat, Haryana, Himachal Pradesh, Jammu & Kashmir, Jharkhand, Karnataka, Madhya Pradesh, Maharashtra, Punjab, Rajasthan, Tamil Nadu, Telangana, Uttar Pradesh and Uttarakhand and 4 UTs of Chandigarh, Delhi, Dadra & Nagar Haveli and Puducherry. These States/UTs account for about 86% of reporting area and are covered under Timely Reporting Scheme (TRS) under which 20% villages are selected at random for complete area enumeration.

The second category includes those States where area statistics are collected on the basis of sample surveys conducted under the scheme of Establishment of an Agency for Reporting of Agricultural Statistics (EARAS). This scheme was introduced in Kerala, Odisha and West Bengal, and later extended to Arunachal Pradesh, Nagaland, Sikkim and Tripura. The scheme envisages, inter-alia, estimation of area through sample surveys in a sufficiently large sample of 20% villages/investigator zones. These states account for about 9% of reporting area.

The third category covers the hilly districts of Assam, the rest of North-Eastern states (other than Arunachal Pradesh, Nagaland, Tripura and Sikkim), Goa, UTs of Andaman & Nicobar Islands, Daman & Diu and Lakshadweep where no reporting agency had been functioning. In this category of states, work of collection of Agricultural Statistics is entrusted with the village headmen. The area statistics in these states are based on impressionistic approach. These areas/states account for 5% of the reporting area.

Keeping in phase with technological advancements and digitalization across the various sectors, this Ministry has undertaken the implementation of Digital Crop Survey (DCS). The DCS facilitates the village wise crop area for each season for an agricultural year. Hence, as per new guidelines issued by ES&E Division, DA&FW the village wise area estimates shall be prepared on the basis of Digital Crop Survey (DCS) (i.e. 100% villages coverage) instead of TRS/EARAS based estimates. However, in those states where DCS is not yet fully implemented, they may continue to follow the existing methodology of 20% sampled villages till the State gets on boarded into DCS.

1.3 Yield Estimates

The second most important component of production statistics is yield rates. The yield estimates of major crops are obtained through analysis of Crop Cutting Experiments (CCE) conducted under scientifically designed General Crop Estimation Surveys (GCES). At present, over 95% of the production of foodgrains is estimated on the basis of yield rates obtained from the CCEs. Field Operations Divisions (FOD) of the National Statistics Office (NSO) has been providing technical guidance to the States and Union territories for organizing and conducting Crop Estimation Surveys for estimating yield rates of principal crops. In addition, NSO in collaboration with States/Union Territories implements sample check programmes on area enumeration work, area aggregation and conduct of crop cutting experiments under the Scheme for Improvement of Crop Statistics (ICS). While executing the programme of sample checks on crop cutting experiments, the FOD associates itself with the operational aspects of the conduct of crop cutting experiments right from selection of sample villages, training of field staff to the supervision of field work,

Contd...

and in the process gathers micro level information relating to conduct of crop cutting experiments for estimation of crop yield. NSO regularly brings out its annual publication entitled "Consolidated Results of Crop Estimation Surveys on Principal Crops".

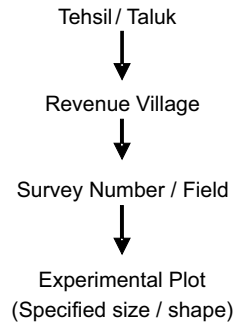

The primary objective of GCES is to obtain fairly reliable estimates of average yield of principal food and non-food crops for States and UTs which are important from the point of view of crop production. The estimates of yield rates thus arrived at are generally adopted for the purposes of planning, policy formulation and implementation. The CCEs consist of identification and marking of experimental plots of a specified size and shape in a selected field on the principle of random sampling, harvesting and threshing the produce and recording of the harvested produce for determining the percentage recovery of dry grains or the marketable form of the produce.

To record the details of Crop Cutting Experiments (CCEs) for yield estimation under GCES, the Ministry has developed a simple and user-friendly web portal and mobile application with the facilities of geo-tagging and photo validation of crop fields.

1.4 Sampling Design

Stratified multi-stage random sampling design is generally adopted for carrying out GCES with tehsils/ taluks/ revenue inspector circles/CD blocks/anchals, etc., as strata, revenue villages within a stratum as first stage unit of sampling, survey numbers/fields within each selected village as sampling unit at the second stage and experimental plot of a specified shape and size as the ultimate unit of sampling as depicted in Figure 1.1.

Figure 1.1: Sampling Design for GCES

In each selected primary unit, generally 2 survey numbers/fields growing the experimental crop are selected for conducting CCE. Generally, 80-120 experiments are selected in a major crop growing district, where a district is considered as major for a given crop if the area under the crop in the district exceeds 80,000 hectares or lies between 40,000 and 80,000 hectares but exceeds the average area per district in the State. Otherwise, the district is considered as minor for a given crop. Experiments in minor districts are so adjusted that the precision of the estimates is fairly high and the workload on the field staff is manageable. On an average, about 44 or 46 experiments are planned in a minor district. The number of experiments allotted to a district is distributed among the strata within the district roughly in proportion to the area under the crop in the stratum.

1.5 Advance Estimates of Area and Production

The period of an agricultural crop year is from July to June, during which various farm operations from preparation of seed bed, nursery, sowing, transplanting various inter-culture operations, harvesting, threshing, etc. are carried out. Different crops are grown during the agricultural seasons in a crop year.

Final estimates of production based on complete enumeration of area and yield through crop cutting experiments become available much after the crops are actually harvested. However, the Government requires advance estimates of production for taking various policy decisions relating to pricing, marketing, export/import, distribution, etc. The main factors contributing to the relatively large number of crop estimates are the large variations in crop seasons across the country. Further, from the year 2022-

Contd...

23, the estimates schedules and number of estimates have been revamped considering the genuine and timely requirement of crop estimates much before the crops are harvested for various policy purposes. The revamped timelines for releasing the crop production estimates are elaborated as under:

1.6 First Advance Estimates

The first advance estimates of area and production of Kharif crops are prepared and released in October every year, when south-west monsoon season is about to be over and Kharif crops are at an advanced stage of maturity. The assessment is made by the State Governments based on the reports from the field offices of the State Department of Agriculture. They are mainly guided by field observations. These are validated on the basis of inputs from the proceedings of Crop Weather Watch Group (CWWG) meetings, and other feedback such as relevant availability of water in major reservoirs, availability/supply of important inputs including credit to farmers, rainfall, temperature, irrigation area enumeration based on Remote Sensing Technology, estimates from Econometrics Modeling, etc.

1.7 Second Advance Estimates

The second advance estimates are prepared and released in the month of February every year. This estimate consists of kharif and rabi season only. The advance estimates of Kharif crops may undergo a revision in the light of flow of more precise information of area and receipt of CCEs from the State Governments. The Second Advance Estimates then cover the second assessment in respect of Kharif crops and the first assessment in respect of Rabi crops which is based on field observation and other related parameters.

1.8 Third Advance Estimates

The third advance estimates for all the seasons, i.e. Kharif, Rabi and Summer are prepared and released in the month of May/June every year. From the Agriculture Year 2022-23, the Rabi season has been segregated into Rabi and Summer season. The earlier advance estimates of both Kharif and Rabi seasons are firmed up/ validated with the information available with State Agricultural Statistical Authorities (SASAs), remote sensing data, available with Space Application Centre, Ahmedabad as well as the proceedings of CWWG. The summer crops estimates are based on field observation and other related parameters.

1.9 Final Estimates

From the Agriculture Year 2022-23, the erstwhile Fourth Advance Estimates is being generated as Final Estimate of the Agriculture Year and are prepared and released in the month of September. The Final Estimate includes all three seasons i.e. Kharif, Rabi and Summer. The states submit finalized area and yield based on CCEs conducted. Further, all other alternative sources such as remote sensing data, econometric modelling, weather conditions etc. are considered in finalizing the estimates. No changes in the crop estimates are entertained after the release of Final Estimate.

1.10 Forecasting Agricultural Output using Space, Agro-meteorology and Land-based Observations (FASAL) 2.0

"Forecasting Agricultural Output using Space, Agro-Meteorology and Land Based Observations (FASAL)" Scheme, an independent component of the "Agriculture Census and Statistics" (erstwhile 'Integrated Scheme on Agriculture Census, Economics & Statistics') has been in operation since 2006. The scheme has been converted into a non-scheme since FY 2023-24. FASAL was initiated with the objective of developing Econometric, Agromet and Remote Sensing based models to generate crop forecasts at the National, State and District levels. The FASAL system integrates various approaches and organizations for creating a hierarchical information system, related to crop condition and crop production at any time of season from sowing to harvest.

FASAL has been revamped as FASAL 2.0 with the inclusion of new organizations and knowledge partners to create a robust, sustainable, and scalable crop forecasting system using the latest technology available and through different forecasting models. Based on core competencies and areas of expertise, new lead agencies such as Indian Agricultural Research Institute (ICAR-IARI) and Space Application Centre (SAC), and new Knowledge Partners such as Indian Agricultural Statistics Research Institute (ICAR-IASRI) and Indian Statistical Institute (ISI), Kolkata along with existing knowledge partner, Institute of Economic Growth (IEG) have been identified under FASAL 2.0.
